### Specialties

All Specialties

### Description

Gain expert knowledge in a virtual learning network with a collaboration of the Cherokee Nation Health Services and Oklahoma State University Center for Health Sciences ECHO team. The curriculum is designed to increase primary care provider knowledge, skills, and self-efficacy in the prevention, screening, evaluation, and treatment of hepatitis C.

Objective(s): 1 Understand why in Oklahoma, the prevalence of hepatitis C is estimated to be 3.4%, over 2 times the US national estimate. 2 Understand how Hepatitis C care can easily be delivered by primary care clinicians with appropriate training and guidance of specialists in the management of these sometimes difficult to reach patient populations. 3 Rural Oklahoma providers can become local experts in the management and care of hepatitis C infected individuals, thus leading to a wider spread of care for this potentially fatal but easily curable disease.
